**the interaction of well-intentioned features  
can have very bad results**

# Pure Data has

- multiple outputs per connection

# Pure Data has

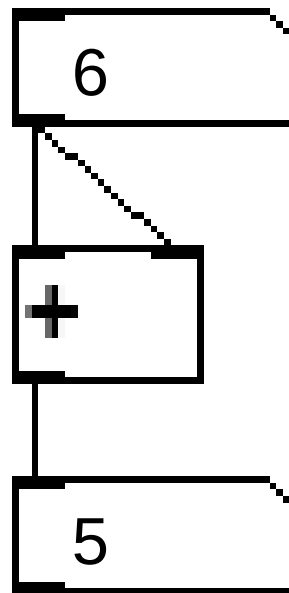

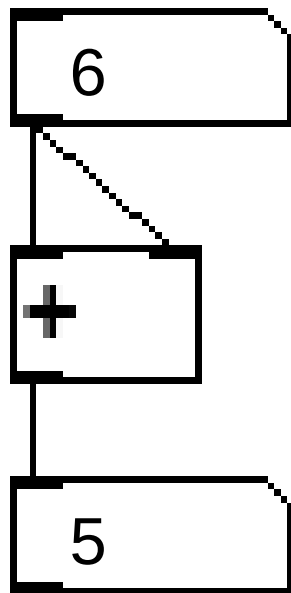

- multiple outputs per connection
- deterministic execution

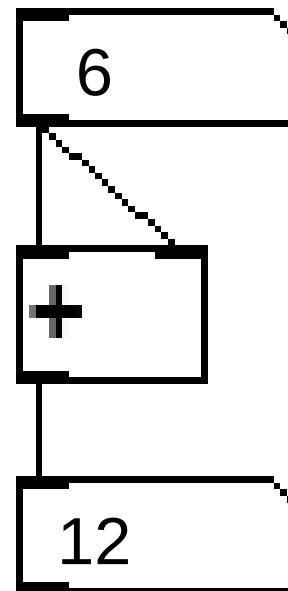

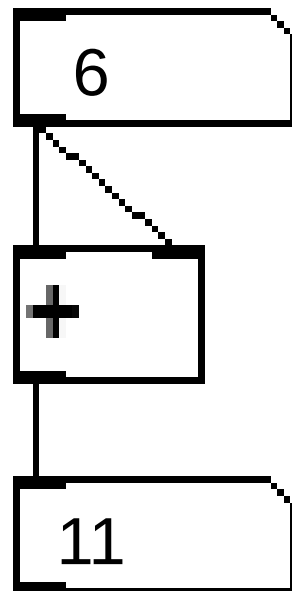

# Pure Data has

- multiple outputs per connection
- deterministic execution
- graph loops for building delays and echoes

# Pure Data has

- multiple outputs per connection
- deterministic execution
- graph loops for building delays and echoes
- triggering and non-triggering inputs

<i>General information</i>	<b>Pure Data</b>	<b>Excel</b>	<b>LabVIEW</b>	<b>Reaktor</b>	<b>VEE</b>	<b>Blender</b>

Table 8.1: A comparison of contemporary dataflow UI-level languages

# In short:

- scripting is not the only way to enable end-user programming,  
UI-level programmability works wonders

# In short:

- scripting is not the only way to enable end-user programming,  
UI-level programmability works wonders
- but needs to be approached as *programming language design*

# In short:

- scripting is not the only way to enable end-user programming,  
UI-level programmability works wonders
- but needs to be approached as *programming language design*
- many successful applications use *dataflow* languages  
and there is a *wealth of research* in the area
